EXAMINER'S AMENDMENT

1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Charles Lyon on 06/08/05. The application has been amended as follows:

In the claims:

Claims 1-41. (cancelled).

Claim 42. (currently amended) A method of forming or erasing an image on a rewritable medium for visual display comprising an electrophoretic coating on a substrate, wherein the electrophoretic coating comprises microcapsules comprising charged particles of one or more colors suspended in a phase change material that has a melting temperature in the range of between about 30°C and about 200°C, wherein particles of at least one color have a positive or a negative charge, and a polymer matrix, wherein the microcapsules are distributed in the polymer matrix ~~Claim 18~~, comprising the steps of:

- a) heating a first section of the electrophoretic coating that comprises one or more picture elements, thereby liquefying the phase change material in the first section;
- b) applying a directional electric field to each picture element of the heated section, thereby causing the charged particles in the liquefied phase change material to migrate;
- c) allowing the first section of the electrophoretic medium to cool, thereby solidifying the phase change material in the first section; and

Art Unit: 2873

d) optionally repeating the steps a) through c) at one or more different sections of the electrophoretic coating.

Claims 61-72. (cancelled).

REASONS FOR ALLOWANCE

2. Claims 42-60 are allowed. The following is a statement of the Examiner's reasons for allowance. The present application relates to a microcapsule that can be used to form a rewritable medium for visual displays. Regarding claim 42, the prior art fails to disclose that the charged particles is suspended in a phase change material having a melting temperature between 30-200 degree Celsius in combination with the steps of heating and liquefying the phase change material before applying electric field to migrate the charged particles, and allowing the phase change material to cool and solidify thereafter. The claimed invention is therefore considered to be in condition for allowance as being novel and non-obvious over prior art.

3. The prior art taken either singly or in combination fails to anticipate or fairly suggest the limitations of the independent claims, in such a manner that a rejection under 35 USC 102 or 103 would be improper. Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Drawings

4. New corrected drawings in compliance with 37 CFR 1.121(d) are required in this application because they contain informal hand marks. Applicant is advised to employ the services of a competent patent draftsman outside the Office, as the U.S. Patent and Trademark Office no longer prepares new drawings. The corrected drawings are required in reply to the Office action to avoid abandonment of the application. The requirement for corrected drawings will not be held in abeyance.
